
FRAUNHOFER INSTITUTE FOR SOLAR ENERGY SYSTEMS ISE

From Cell to System

A brief introduction to the design of a battery system

Bruch Maximilian, Lluís Millet
Biosca

Fraunhofer Institute for Solar Energy
Systems ISE

Joint event - Improving energy
efficiency in electric vehicles

Bologna, 24 November 2016

www.ise.fraunhofer.de

AGENDA

- Introduction Team Battery Modules and Systems at Fraunhofer Institute for Solar Energy Systems ISE
- Lithium-Ion-Batteries an overview
- Chemistries and shapes
- State of charge estimation
- Battery longevity
- Battery system design

Team Battery Modules and Systems at Fraunhofer ISE

- **Testing** of batteries (cells, modules, systems)
- **Lifetime** and **thermal optimization**
- Development of battery management systems (**BMS**)
- **Quality assurance** for PV power plants with battery storage
- Electrical, electrochemical and thermal **modeling** (SOC/SOH)
- Optimization of **operational management** of battery systems
- **Safety** concepts

ELAAN

Team Battery Modules and Systems at Fraunhofer ISE

Battery testing and laboratory equipment

Team Battery Modules and Systems at Fraunhofer ISE

Cell Testing

max. current	10 A
max. voltage	Bis 18 V
channels	84
cell example	2 Ah (18650)

Team Battery Modules and Systems at Fraunhofer ISE

Battery testing and laboratory equipment

**300 A Cell
tester** →

**IBC284
Calorimeter**

Lithium-Ion-Batteries an overview

Historical review

- 6. November 1780
Luigi Galvani
"animal electricity"

- **Alessandro Volta**
voltaic pile
(first battery)

Lithium-Ion-Batteries an overview

Lithium ion (galvanic) cell

- Pro:
 - High energy density
 - No memory effect
 - Rechargeable
 - Long life expectancy
 - Low self-discharge
- Con:
 - Safety
 - Sensible operating conditions

[Axeon: Our Guide to Batteries. [ONLINE], URL:
<http://www.jmbatterysystems.com/JMBS/media/JMBS/Technology/Axeon-Guide-to-Batteries-2nd-edition.pdf>.]

Lithium-Ion-Batteries an overview

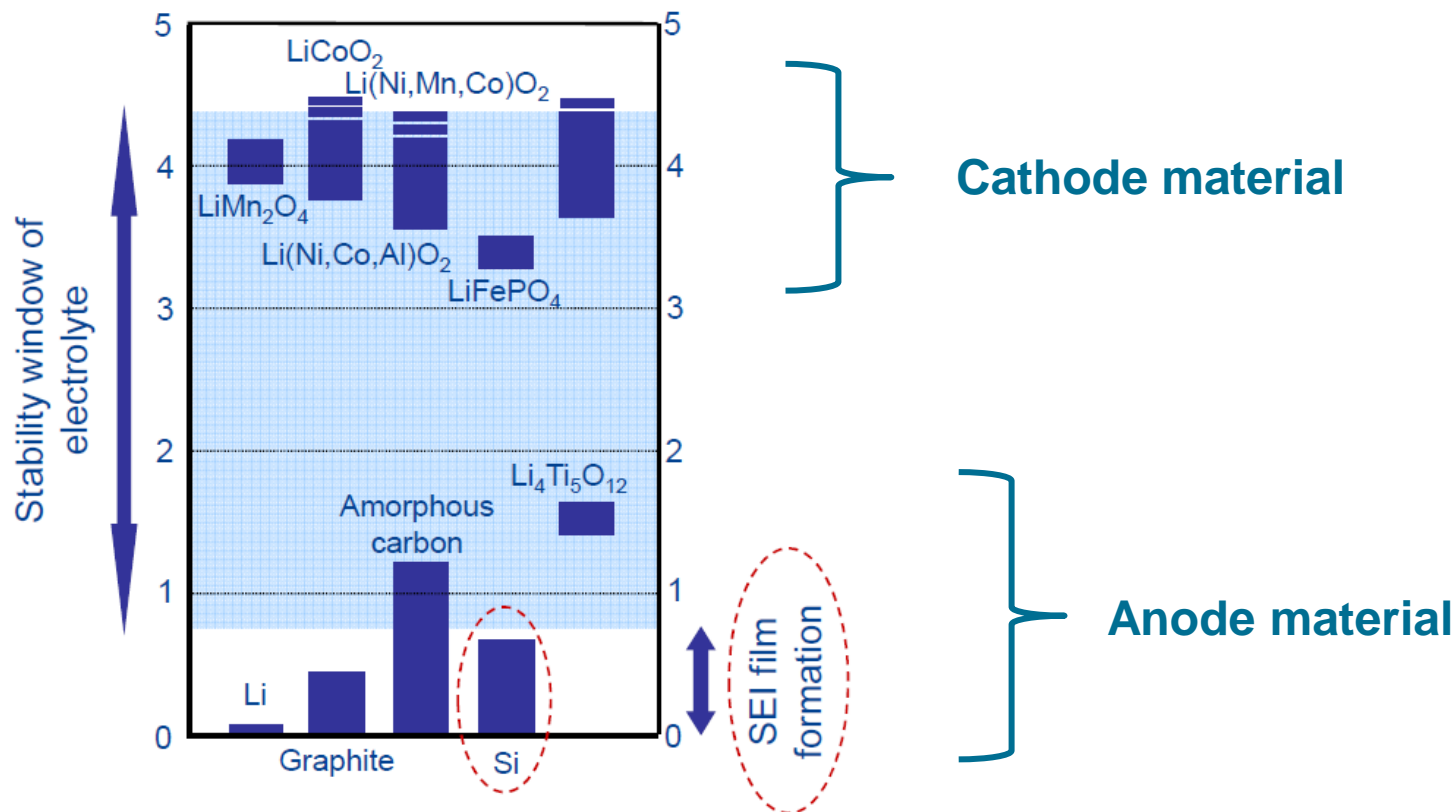

Properties

- Voltage U [V]
- Capacity C [Ah])
($= \int I \cdot dt$)
- Current I [A]
- El. resistance
- Temperature influence

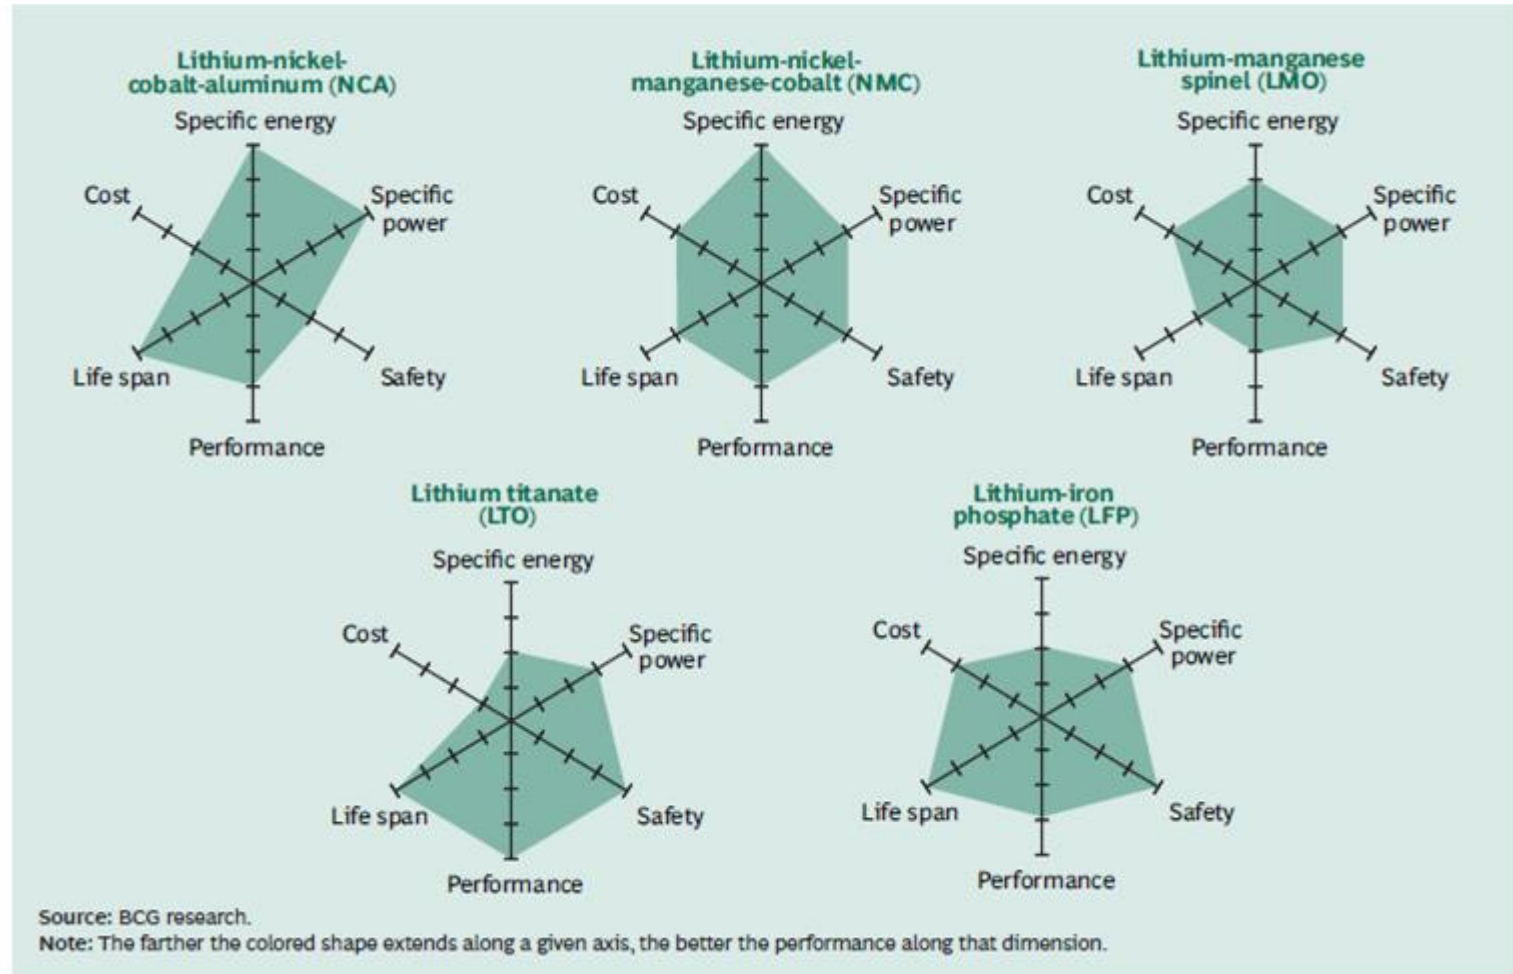

[Don Tuite: Understanding The Factors In The Lithium-Battery Equation; Electronic Design; Jun 22, 2012 [ONLINE], URL: <http://electronicdesign.com/power/understanding-factors-lithium-battery-equation.>]

Chemistries and shapes

[Li, J. a.o.: Life cycle tests and resistance characterization of Li-ion cells with Si-based composite anodes. AAB Conference (26.-29. Januar 2015), Zentrum für Sonnenenergie- und Wasserstoff-Forschung Baden-Württemberg, Mainz, 2015.]

Chemistries and shapes

[Boston Consulting Group: <https://www.bcg.com/documents/file36615.pdf> 2010]

Chemistries and shapes

Shapes

■ Three different main shapes

[Axeon: Our Guide to Batteries. [ONLINE], URL: <http://www.jmbatterysystems.com/JMBS/media/JMBS/Technology/Axeon-Guide-to-Batteries-2nd-edition.pdf>.]

Chemistries and shapes

Methodical selection

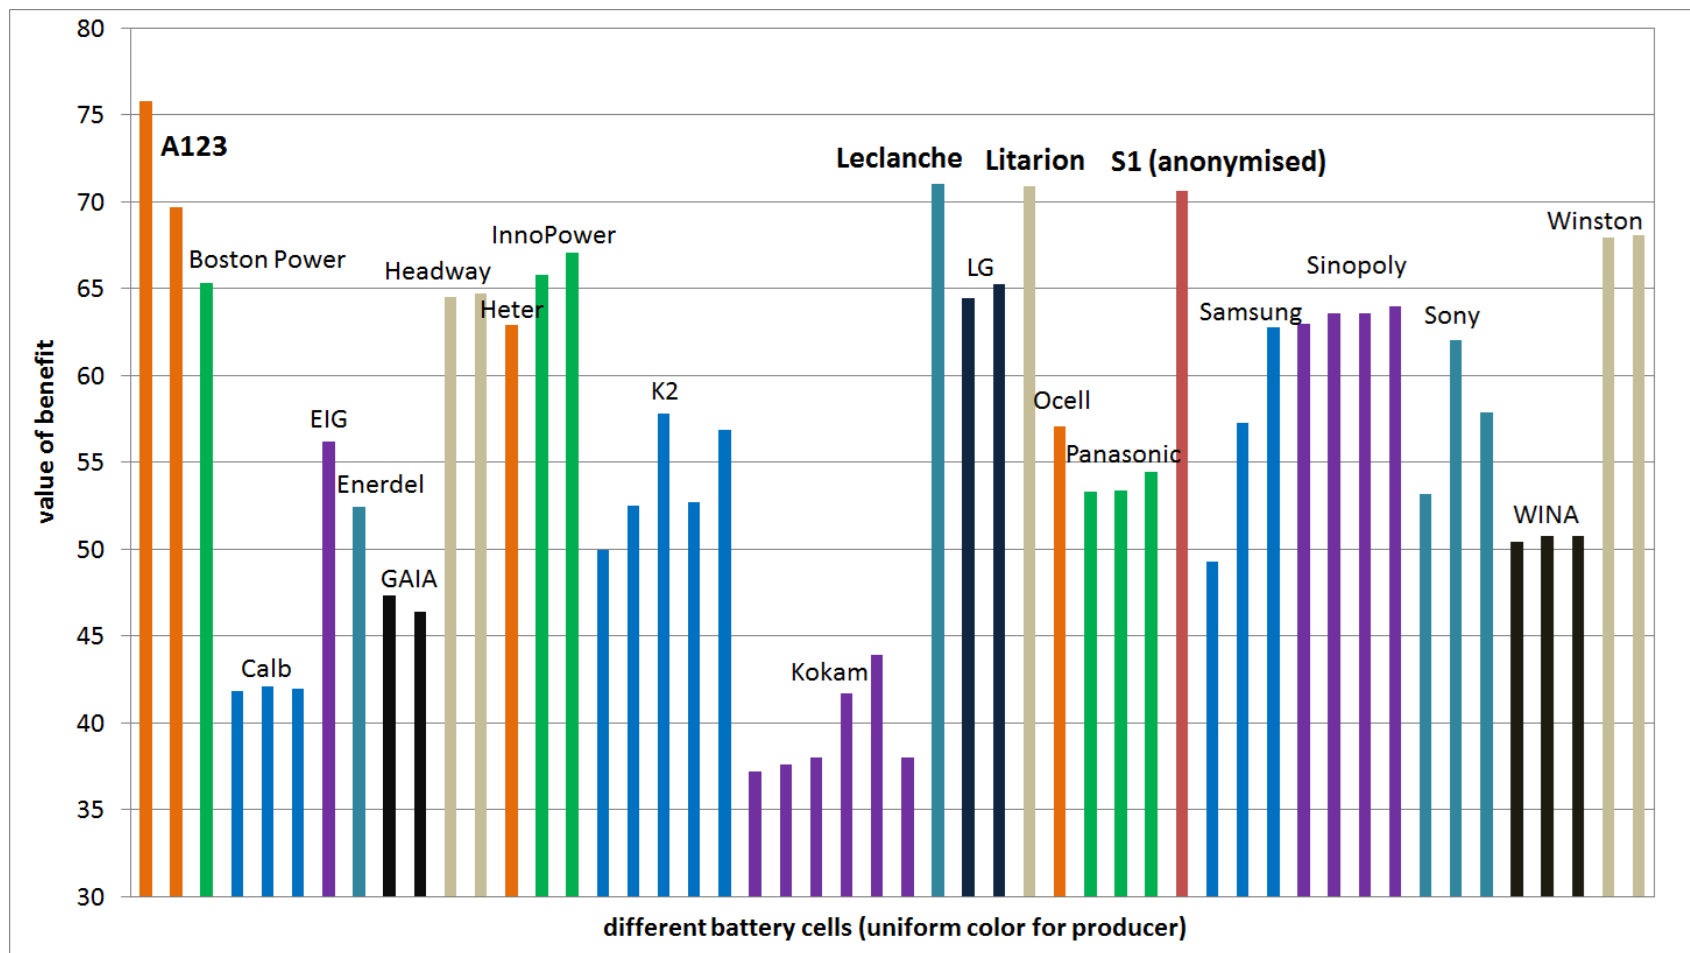

- Benefit analysis
 - Identification of important battery properties (= decision criteria)
 - Database of 49 different battery cells (u.a. lifespan, energy density, maximum charge and discharge currents, geometrie, ...)
 - Rating of the decision criteria
 - Weighting by the project partners

Chemistries and shapes

Methodical selection

State of charge estimation

Two main methods

State of charge estimation

Two main methods

- Voltage U [V]
- Capacity C [Ah])
($= \int I \cdot dt$)
- Current I [A]
- El. resistance
- Temperature influence

[Don Tuite: Understanding The Factors In The Lithium-Battery Equation; Electronic Design; Jun 22, 2012 [ONLINE], URL: <http://electronicdesign.com/power/understanding-factors-lithium-battery-equation.>]

State of charge estimation

Two main methods

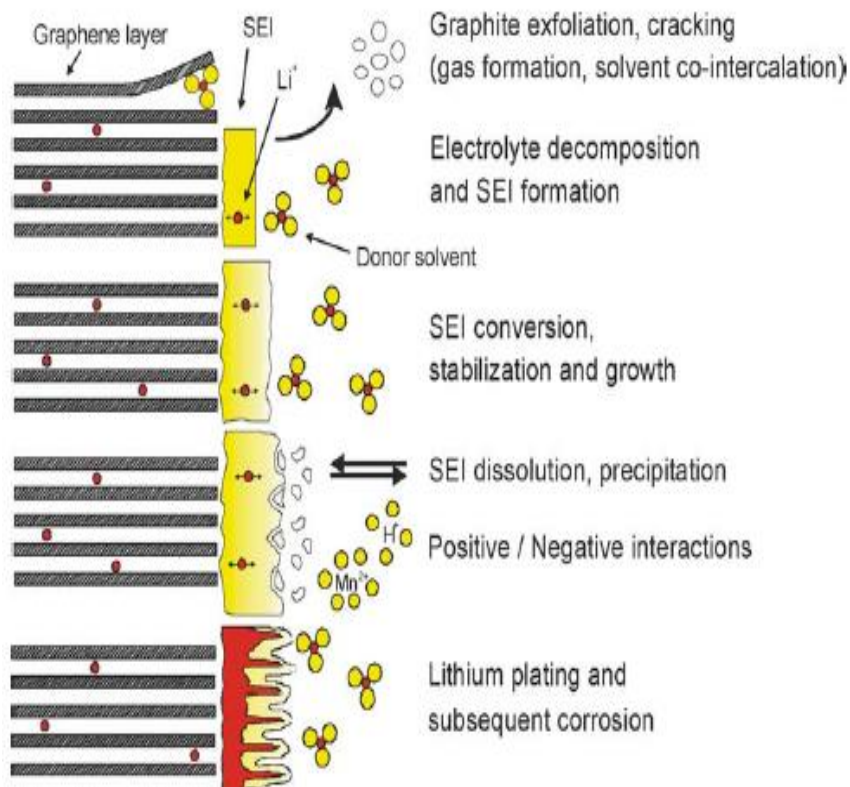

- Voltage U [V]
 - Capacity C [Ah])
($= \int I \cdot dt$)
 - Current I [A]
 - El. resistance
 - Temperature influence
- „Amp counting“
- Voltage \leftrightarrow SOC relationship
- Electrical model needed
 - Statistic filter (kalman filter)

Battery longevity

Ageing processes

[J. Vetter et al, J. Power Sources 147(2005) 269-281]

Battery longevity

Ageing behaviour

Battery longevity

Ageing behaviour

Graphite anode:

Fresh

In linear aging stage

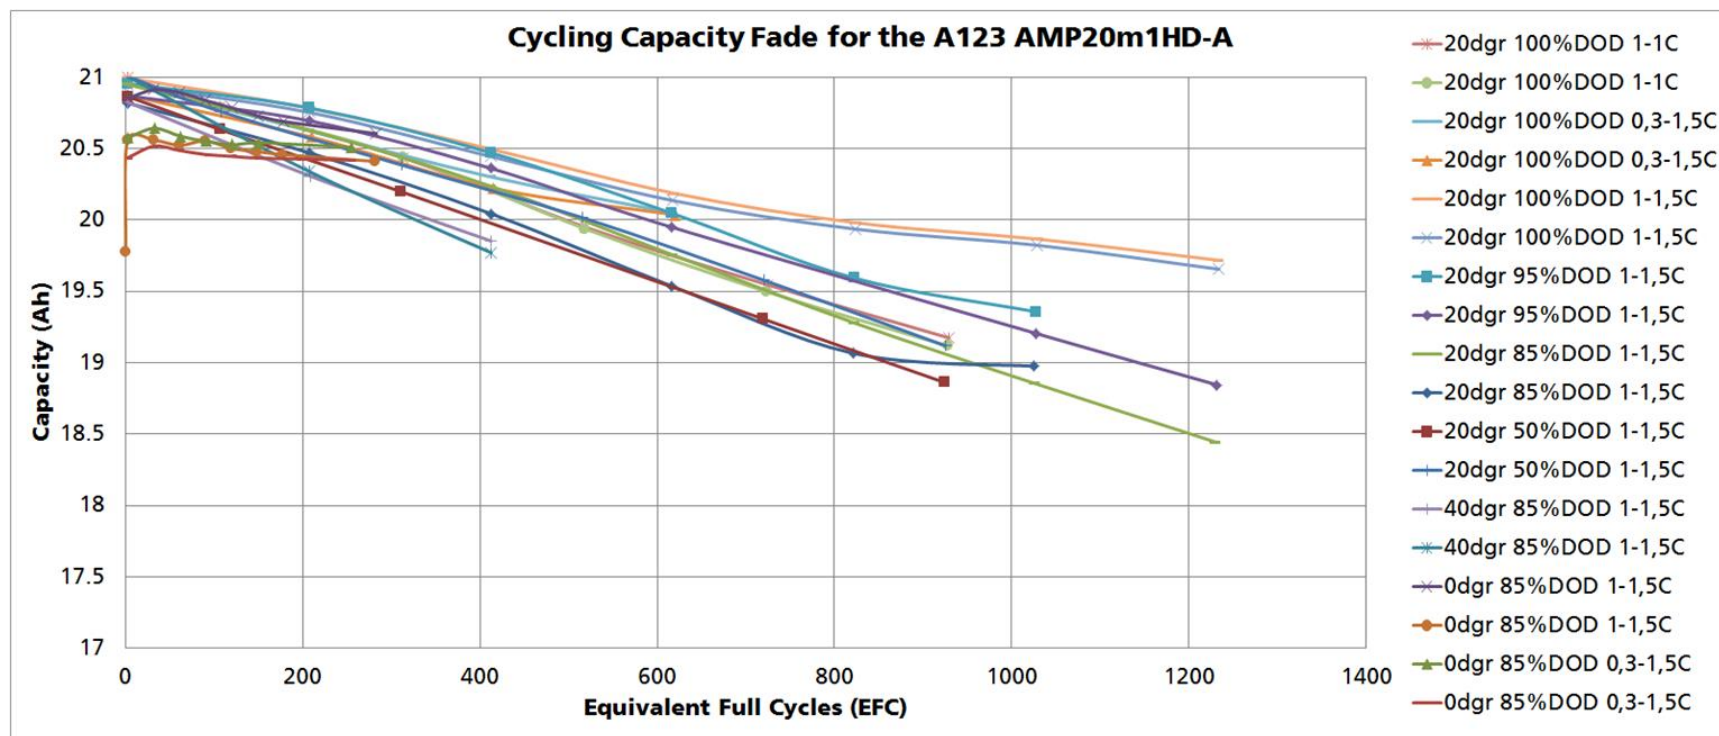

In non-linear aging stage

Battery longevity

Ageing behaviour in JOSPEL

■ cycling

Battery longevity

Ageing behaviour in JOSPEL

■ calendaric

Battery longevity

Ageing model

- preliminary model
 - calendaric

$$C\text{-loss} = f_{(\text{SOC})} \cdot$$

$$F_1 \cdot e^{(F_2 \cdot T)} \cdot t^{(F_3 \cdot T + F_4)}$$

[Battery Pack Design, Validation, and Assembly Guide using A123 Systems AMP20M1HD-A Nanophosphate Cells]

Battery longevity

Ageing model

■ preliminary model

■ calendaric

$$C\text{-loss} = f_{(\text{SOC})} \cdot$$

$$F_1 \cdot e^{(F_2 \cdot T)} \cdot t^{(F_3 \cdot T + F_4)}$$

■ operation:

$$C\text{-loss} = F_5 \cdot e^{(F_6 \cdot T)} \cdot$$

$$\int |I_{(t)}| \cdot dt$$

State of Health
(SOH)
